NATIVE: ONE INTENT, GROWN WITH THE COMPASS

One line, grown into a company

Start with one intent. Add one question at a time. Watch the same picture grow until a whole company stands on it. Nine questions, one lending company.

every slide: one more question, the picture grows

Draft for the founder's read, 2026-10-12. Figures are examples, marked as such. A companion to "One goal, many subgoals".

START

It begins with one line

Not a goal yet. No person, no number, no check. Just an intent, said once.

THE INTENT

I want to lend small amounts to salaried people the banks turn away.

Everything that follows is this line, asked nine questions.

QUESTION 1, RESEARCH: WHO

Who is it for?

One person, drawn sharply enough to recognise in a queue. The line gains a person.

WHO IS IT FOR

salaried, 25,000 to 60,000 a month
a sudden need of 1 to 3 lakh; banks refuse or take 2 weeks; wants money in 2 days
example figures; assumptions A, B

THE INTENT

I want to lend small amounts to salaried people the banks turn away.

Research question, outside world. Every figure has a source or a letter; the letter means it is assumed and will be checked.

QUESTION 2, RESEARCH: WHAT MUST MOVE

What must move?

One or two numbers, readable from the company's own record. The line gains its check and becomes a goal.

WHO IS IT FOR

salaried, 25,000 to 60,000 a month

a sudden need of 1 to 3 lakh; banks refuse or take 2 weeks; wants money in 2 days

example figures; assumptions A, B

THE GOAL

I want to lend small amounts to salaried people the banks turn away.

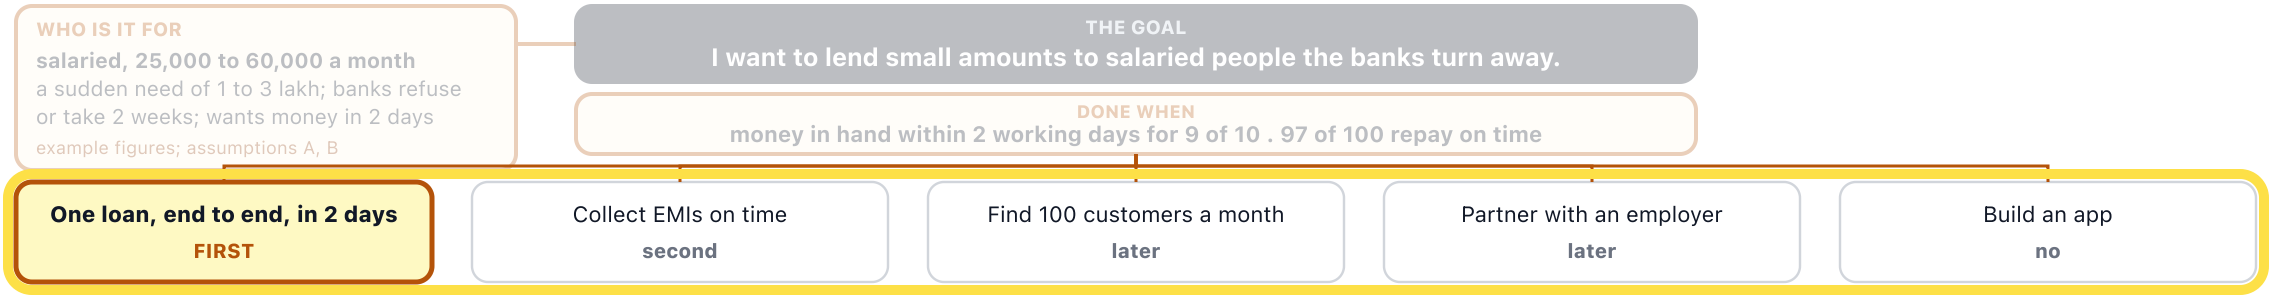

DONE WHEN

money in hand within 2 working days for 9 of 10 . 97 of 100 repay on time

Two numbers because one alone can be gamed. In Native this is the impact axis: ruled 2026-09-25, not yet built.

Which first?

The goals this one implies, ranked on impact and on how firm the ground is. One is lit: one loan, end to end.

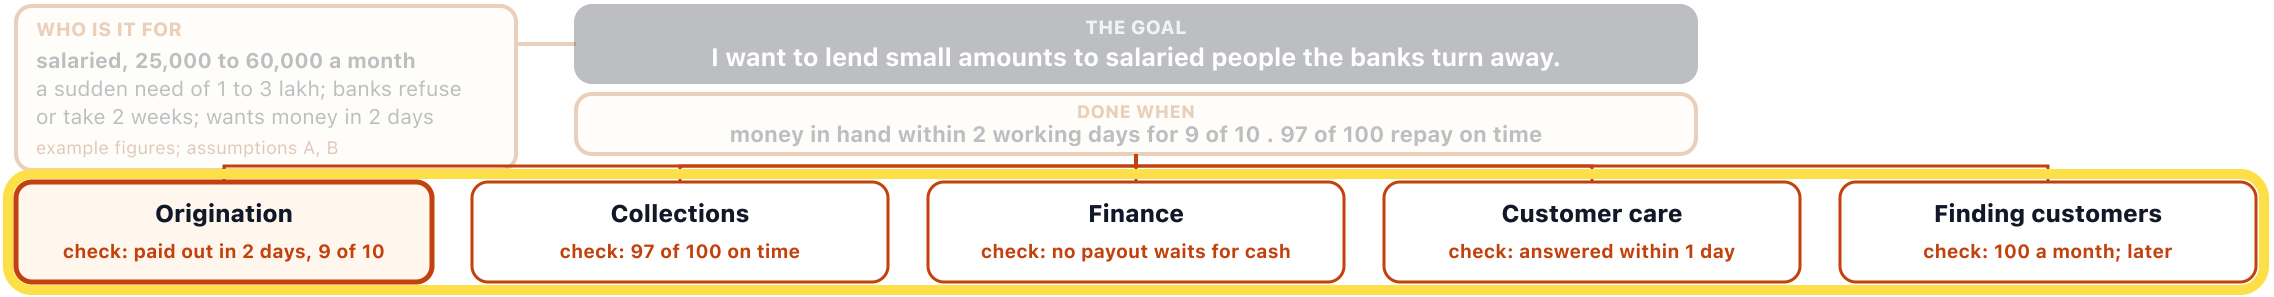

In Native this is Priority's job. A goal without a number cannot be ranked, which is why question 2 comes before 3.

QUESTION 4, SHAPE, RUNG 1

What pieces does the company have?

The goal cut along the seams of the work: five departments, each with its own check. The first pick became Origination's goal.

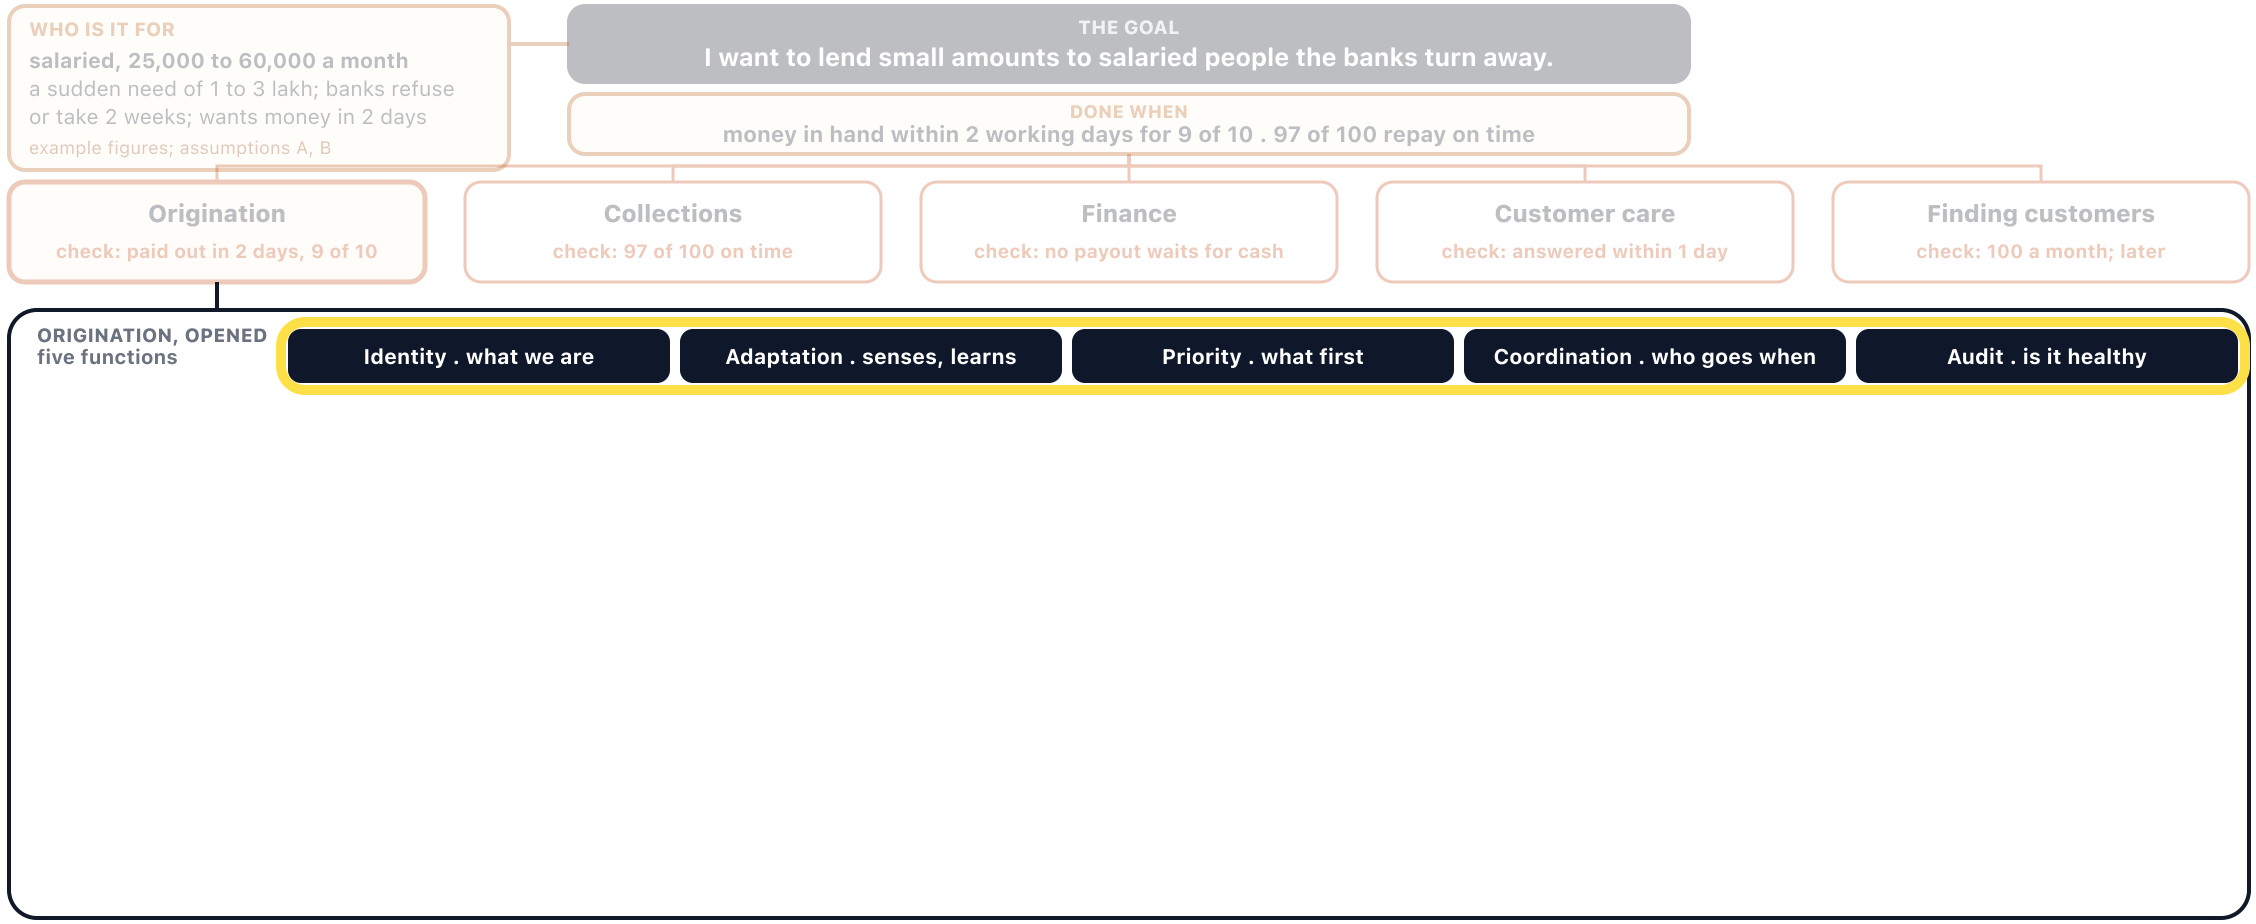

The other four are drawn now and started later, when their pain appears. Research is grayed: it has done its job.

QUESTION 4, SHAPE, THE DEPARTMENT OPENS

Every department is born the same way

Origination opens. Around its goal sit the five functions that keep it honest. The same five in every department, at every level.

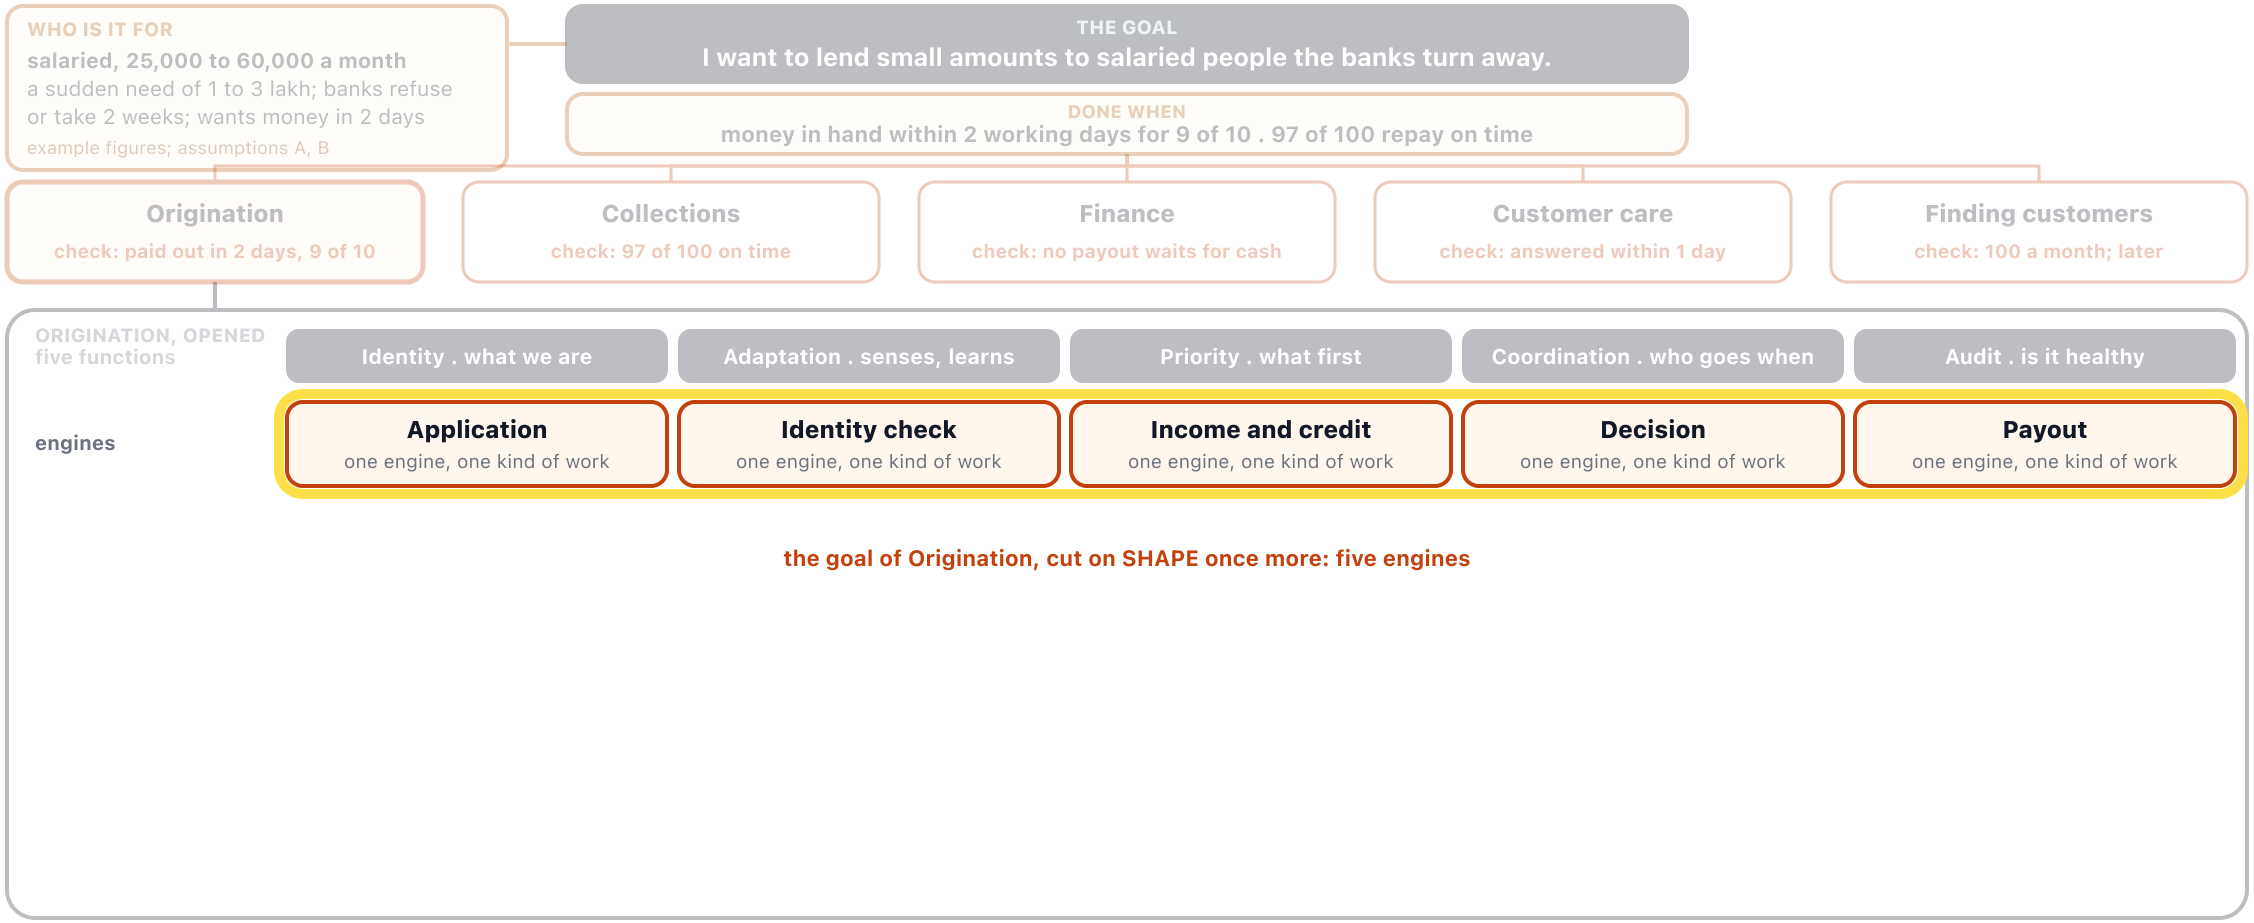

Identity: what we are and never do. Adaptation: senses the record, proposes. Priority: what first. Coordination: who goes when. Audit: is it healthy.

QUESTION 4, SHAPE, RUNG 2

What pieces does one loan have?

Origination's goal cut once more: five engines, each doing one kind of work. The same move as rung 1, one level down.

These are the five pieces of the companion deck. Nothing new was invented; the cut was repeated.

QUESTION 5, TIME

When does each piece happen, and by when?

The engines crossed with four phases: the grid of subgoals appears. Eleven cells with work, nine honest empty cells.

WHO IS IT FOR
salaried, 25,000 to 60,000 a month
a sudden need of 1 to 3 lakh; banks refuse or take 2 weeks; wants money in 2 days
example figures; assumptions A, B

THE GOAL
I want to lend small amounts to salaried people the banks turn away.

DONE WHEN
money in hand within 2 working days for 9 of 10 . 97 of 100 repay on time

Origination	Collections	Finance	Customer care	Finding customers
check: paid out in 2 days, 9 of 10	check: 97 of 100 on time	check: no payout waits for cash	check: answered within 1 day	check: 100 a month; later

ORIGINATION, OPENED five functions

Identity . what we are	Adaptation . senses, learns	Priority . what first	Coordination . who goes when	Audit . is it healthy

engines x phases	1 Apply, day 0	2 Check, within 4 h	3 Decide, within 1 day	4 Pay out, within 2 days
A. Application engine	A1. Take the form and the documents	A2. Ask for what is missing	no work here	no work here
B. Identity check engine	B1. Customer uploads an ID	B2. Match the ID to photo and registry	no work here	no work here
C. Income and credit engine	C1. Customer gives bank statements	C2. Read statements, pull the credit score	no work here	no work here
D. Decision engine	no work here	no work here	D3. Compare with policy; set the terms	no work here
E. Payout engine	no work here	no work here	E3. Draft the agreement	E4. Send the money, open the account, tel

Each filled cell is one subgoal with one check. This is where the owner's line becomes work a system can run.

QUESTION 6, EDGE

Who does each cell, and who hands to whom?

One reading added to every cell: the owner. Every border between two colours is a hand-off the record must keep.

WHO IS IT FOR
salaried, 25,000 to 60,000 a month
a sudden need of 1 to 3 lakh; banks refuse or take 2 weeks; wants money in 2 days
example figures; assumptions A, B

THE GOAL
I want to lend small amounts to salaried people the banks turn away.

DONE WHEN
money in hand within 2 working days for 9 of 10 . 97 of 100 repay on time

Origination	Collections	Finance	Customer care	Finding customers
check: paid out in 2 days, 9 of 10	check: 97 of 100 on time	check: no payout waits for cash	check: answered within 1 day	check: 100 a month; later

ORIGINATION, OPENED

five functions	Identity . what we are	Adaptation . senses, learns	Priority . what first	Coordination . who goes when	Audit . is it healthy
engines x phases	1 Apply, day 0	2 Check, within 4 h	3 Decide, within 1 day	4 Pay out, within 2 days	
A. Application engine	A1. Take the form and the documents — officer	A2. Ask for what is missing — officer	no work here	no work here	
B. Identity check engine	B1. Customer uploads an ID — customer	B2. Match the ID to photo and registry — system	no work here	no work here	
C. Income and credit engine	C1. Customer gives bank statements — customer	C2. Read statements, pull the credit score — system	no work here	no work here	
D. Decision engine	no work here	no work here	D3. Compare with policy; set the terms — credit desk	no work here	
E. Payout engine	no work here	no work here	E3. Draft the agreement — system	E4. Send the money, open the account, tell — finance	

Four hand-offs: customer to officer, officer to system, system to credit desk, credit desk to finance. Four places work can wait.

QUESTION 7, GOVERN

May this cell go on its own, or must someone stamp it?

auto, ask, deny on every cell. Two asks for the owner. One cell that can stop the whole loan.

WHO IS IT FOR
salaried, 25,000 to 60,000 a month
a sudden need of 1 to 3 lakh; banks refuse or take 2 weeks; wants money in 2 days
example figures; assumptions A, B

THE GOAL
I want to lend small amounts to salaried people the banks turn away.

DONE WHEN
money in hand within 2 working days for 9 of 10 . 97 of 100 repay on time

Origination	Collections	Finance	Customer care	Finding customers
check: paid out in 2 days, 9 of 10	check: 97 of 100 on time	check: no payout waits for cash	check: answered within 1 day	check: 100 a month; later

ORIGINATION, OPENED

five functions	Identity . what we are	Adaptation . senses, learns	Priority . what first	Coordination . who goes when	Audit . is it healthy
engines x phases	1 Apply, day 0	2 Check, within 4 h	3 Decide, within 1 day	4 Pay out, within 2 days	
A. Application engine	A1. Take the form and the documents — officer, auto	A2. Ask for what is missing — officer, auto	no work here	no work here	
B. Identity check engine	B1. Customer uploads an ID — customer, auto	B2. Match the ID to photo and registry — system, deny	no work here	no work here	
C. Income and credit engine	C1. Customer gives bank statements — customer, auto	C2. Read statements, pull the credit score — system, auto	no work here	no work here	
D. Decision engine	no work here	no work here	D3. Compare with policy; set the terms — credit desk, ask	no work here	
E. Payout engine	no work here	no work here	E3. Draft the agreement — system, auto	E4. Send the money, open the account, tell — finance, ask	

The stamps are known before the run. Nobody is surprised by an ask, and nothing leaves the record without one.

QUESTION 8, RESOURCE

What does each cell spend?

Minutes of a person, calls of the system. One run: 22 person-minutes, 14 calls, 2 working days. Example figures.

WHO IS IT FOR
salaried, 25,000 to 60,000 a month
a sudden need of 1 to 3 lakh; banks refuse or take 2 weeks; wants money in 2 days
example figures; assumptions A, B

THE GOAL
I want to lend small amounts to salaried people the banks turn away.

DONE WHEN
money in hand within 2 working days for 9 of 10 . 97 of 100 repay on time

Origination	Collections	Finance	Customer care	Finding customers
check: paid out in 2 days, 9 of 10	check: 97 of 100 on time	check: no payout waits for cash	check: answered within 1 day	check: 100 a month; later

ORIGINATION, OPENED five functions

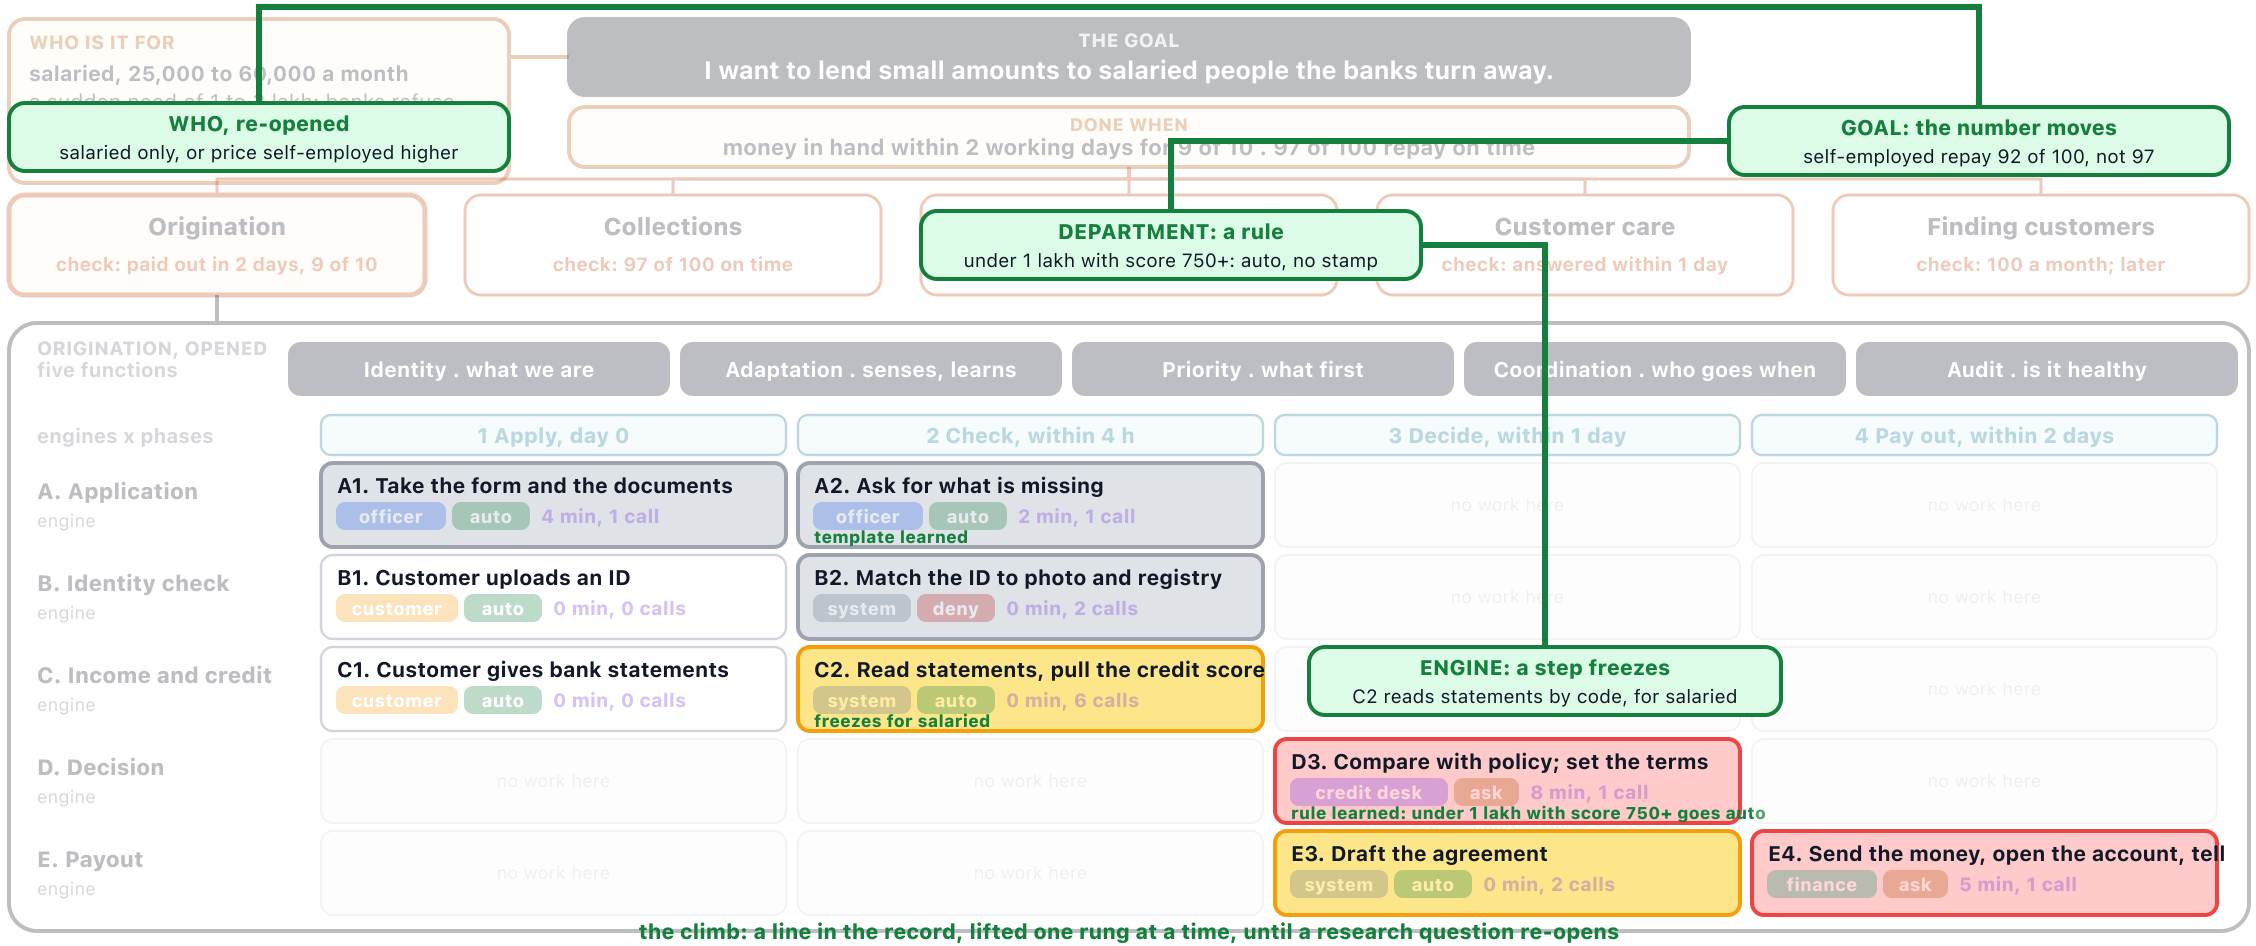

engines x phases	1 Apply, day 0	2 Check, within 4 h	3 Decide, within 1 day	4 Pay out, within 2 days
A. Application engine	A1. Take the form and the documents — officer, auto, 4 min, 1 call	A2. Ask for what is missing — officer, auto, 2 min, 1 call	no work here	no work here
B. Identity check engine	B1. Customer uploads an ID — customer, auto, 0 min, 0 calls	B2. Match the ID to photo and registry — system, deny, 0 min, 2 calls	no work here	no work here
C. Income and credit engine	C1. Customer gives bank statements — customer, auto, 0 min, 0 calls	C2. Read statements, pull the credit score — system, auto, 0 min, 6 calls	no work here	no work here
D. Decision engine	no work here	no work here	D3. Compare with policy; set the terms — credit desk, ask, 8 min, 1 call	no work here
E. Payout engine	no work here	no work here	E3. Draft the agreement — system, auto, 0 min, 2 calls	E4. Send the money, open the account, tell — finance, ask, 5 min, 1 call

The scarcest stock is the owner's attention; the two asks are where it goes.

QUESTION 9, GROW

After 40 loans, what has the record taught?

GROW does not cut. It reads the record and climbs: a step freezes, a rule appears, the goal's number moves, and a research question re-opens.

Frozen cells are gray, warm cells yellow, hot cells red. The climb ends where the deck began: WHO is it for.

WHO MOVE FIRST SHAPE TIME EDGE GOVERN RESOURCE GROW

The whole company, from one line

Everything on this picture came from one intent and nine questions. The owner wrote the line and stamped two asks.

WHO IS IT FOR
salaried, 25,000 to 60,000 a month
a sudden need of 1 to 3 lakh; banks refuse or take 2 weeks; wants money in 2 days
example figures; assumptions A, B

THE GOAL
I want to lend small amounts to salaried people the banks turn away.

DONE WHEN
money in hand within 2 working days for 9 of 10 . 97 of 100 repay on time

Origination	Collections	Finance	Customer care	Finding customers
check: paid out in 2 days, 9 of 10	check: 97 of 100 on time	check: no payout waits for cash	check: answered within 1 day	check: 100 a month; later

ORIGINATION, OPENED five functions

	Identity . what we are	Adaptation . senses, learns	Priority . what first	Coordination . who goes when	Audit . is it healthy

engines x phases	1 Apply, day 0	2 Check, within 4 h	3 Decide, within 1 day	4 Pay out, within 2 days
A. Application engine	A1. Take the form and the documents — officer, auto, 4 min, 1 call	A2. Ask for what is missing — officer, auto, 2 min, 1 call — template learned	no work here	no work here
B. Identity check engine	B1. Customer uploads an ID — customer, auto, 0 min, 0 calls	B2. Match the ID to photo and registry — system, deny, 0 min, 2 calls	no work here	no work here
C. Income and credit engine	C1. Customer gives bank statements — customer, auto, 0 min, 0 calls	C2. Read statements, pull the credit score — system, auto, 0 min, 6 calls — freezes for salaried	no work here	no work here
D. Decision engine	no work here	no work here	D3. Compare with policy; set the terms — credit desk, ask, 8 min, 1 call — rule learned: under 1 lakh with score 750+ goes aut	no work here
E. Payout engine	no work here	no work here	E3. Draft the agreement — system, auto, 0 min, 2 calls	E4. Send the money, open the account, tell — finance, ask, 5 min, 1 call

The same picture would grow for Collections, for Finance, for the next company: one line, the same nine questions.

TRY IT ON SOMEONE

A case question that leads a person to this picture

Give this to someone who has never seen the compass. Ask the follow-ups in order, only when they stall. A strong answer grows the same picture on its own.

THE QUESTION

A friend has just started a small lending company. One product: personal loans of 1 to 5 lakh for salaried people the banks turn away. She has three staff, a laptop, and no process. She wants a company that can give out a loan without her touching it.

Organise her work so that: (a) a loan is paid out within two working days; (b) she only looks at the things that truly need her; (c) the hundredth loan costs less to process than the first; and (d) after a hundred loans she knows better than today whom to lend to.

Draw it. You may ask me anything about her business.

If they stall, ask	It leads to
Whom should she lend to, and what one number should she watch?	**WHO, WHAT MUST MOVE**
Of everything she could do, what comes first?	**WHICH FIRST**
What are the pieces of her company, and of one loan?	**SHAPE**
When does each piece happen, and by when?	**TIME**
Who does each piece, and who hands to whom?	**EDGE**
Which pieces may run without her?	**GOVERN**
What does each piece cost her, in minutes?	**RESOURCE**
What should change after a hundred loans, and how would she know?	**GROW**

Scoring: a check on the goal; pieces with their own checks; a grid with honest empty cells; named hand-offs; auto versus ask; a cost per piece; a learning loop that changes the cut.

IN ONE SENTENCE

One line, nine questions, one picture that grows. The owner writes the line and stamps the asks; the compass does the rest, and the record makes the next run cheaper.
